

The Crux of the Eastern Mediterranean Dispute: The Megisti Island Case

Cem Demirci
Retired Naval Officer

The maritime delimitation problem in the Eastern Mediterranean and other disputes related to the Aegean Sea have been the source of chronic tension between Turkey and Greece since 1974. The newly discovered oil and gas reserves, estimated to be 879 million barrels and 286.2 trillion cubic feet, respectively, have added another layer to the long-standing tension between the two countries [1]. The territorial claims of both countries are shown in Figure 1.

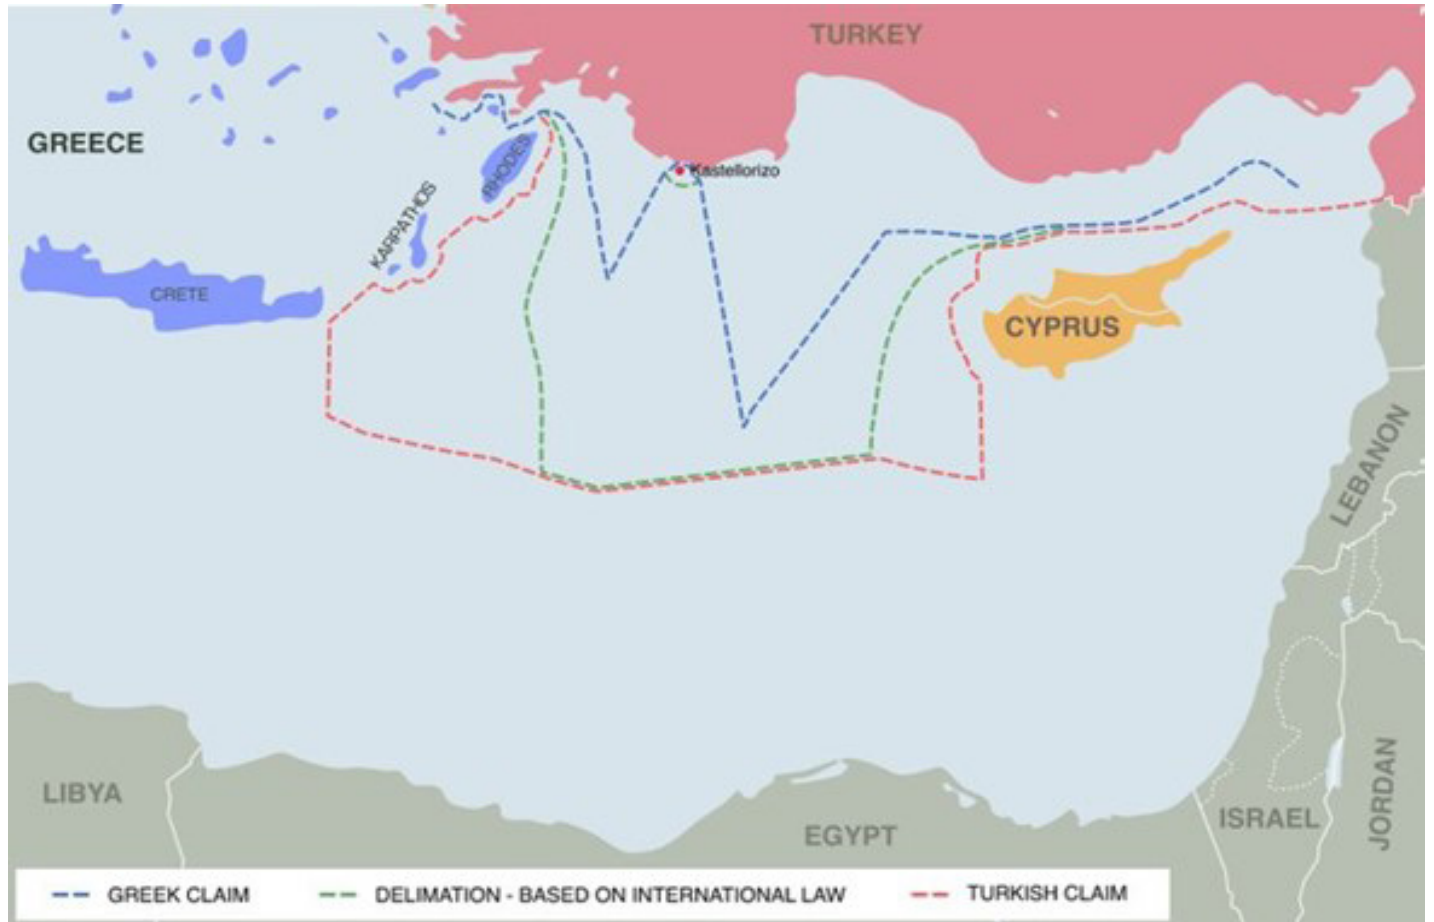

Figure-1 Territorial Claims of Turkey and Greece in the Aegean Sea (prepared by Yunus Emre Açıkgöl) [2]

A discussion about the causes of and the solutions to the dispute from the perspective of international maritime law is difficult because of the political atmosphere in both Turkey and Greece. For example, the authoritarian leadership of Turkish President Recep Tayyip Erdogan has undermined the ability of the government’s institutions to produce rational and reasonable policies to address the issues involved in the dispute. The dispute has instead been used by Erdogan as a domestic policy issue to promote a nationalist sentiment through government-controlled media. Greece, meanwhile, has adopted an opportunist and maximalist approach to the Eastern Mediterranean dispute by relying on a mechanical interpretation of Article 121 of the United Nations Convention on the Law of the Seas (UNCLOS), which conflicts with the ruling by the International Court of Justice (ICJ) and its arbitral tribunal.

Turkey's irredentist and assertive foreign policy under Erdogan and the choice by some E.U. members to support the position of the Greek government, despite the inconsistencies in its claims, have created significant obstacles to resolving the maritime delimitation dispute in the Eastern Mediterranean. The perception, among some government officials in Greece, that Turkey is a state with expansionist tendencies has further complicated attempts to resolve the dispute between the two countries. On the face of it, the claims of Greece about Megisti Island (labeled as Kastellorizo on the map shown in Figure 2) are very strong, given that Article 121 of the UNCLOS explicitly recognizes the full maritime rights of islands within the 200-nautical-mile Exclusive Economic Zone (EEZ) if those islands are above the sea level and suitable for human habitation [3]; however, the equitable and proportionality principles of international law restrict the rights of islands, which are close to other states’ shores and have distortive effects on the delimitation of the maritime zones.

Canada, on the other hand, argued that allowing France to have full maritime zone entitlement to the two islands would create a profound anomaly because the court's calculation of the coastline ratio between Canada and the two islands was 15.3:1. In its ruling, the arbitration court rejected the strict application of the equidistance method for determining maritime entitlement and granted France a very narrow EEZ of 13.8 miles (12 nautical miles) for St. Pierre Island and Miquelon Island. The court's decision is shown in Figure 3. It should be noted that the argument that Canada made to the court is quite similar to the argument that Turkey has made regarding Greece and Megisti Island in the Eastern Mediterranean.

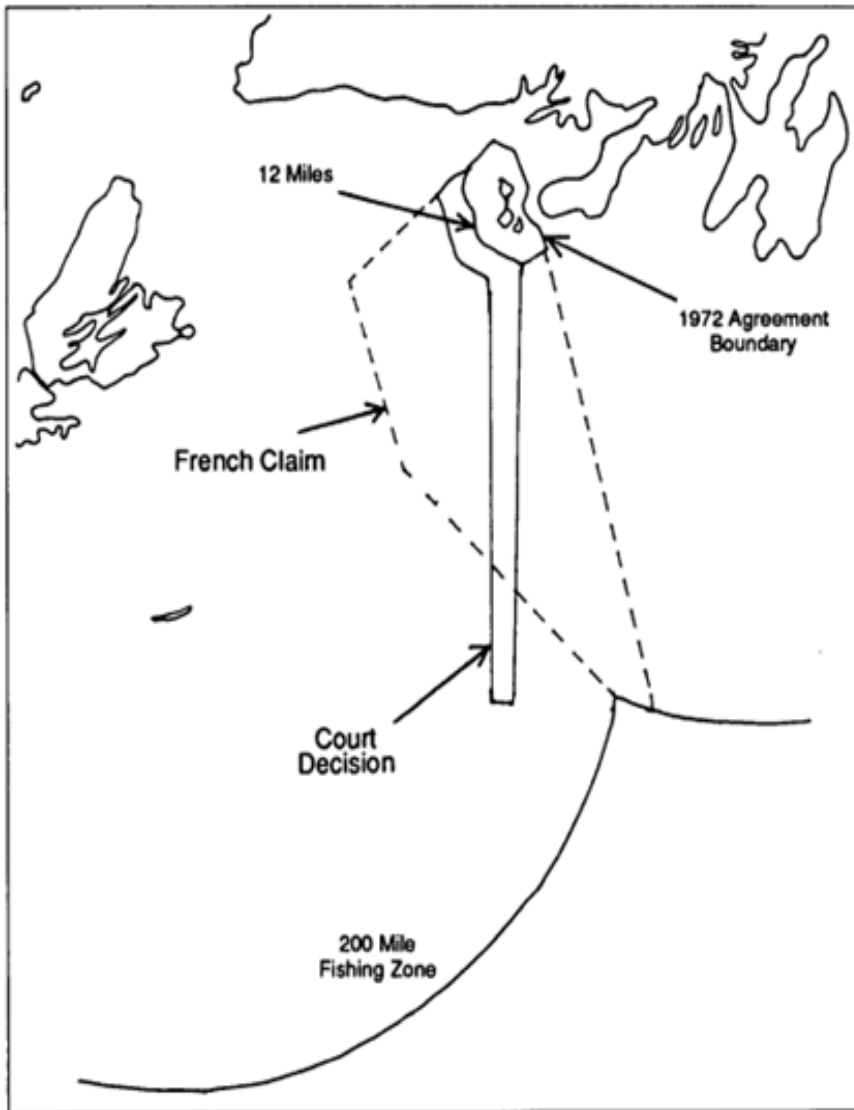

Figure-3 The Decision of the Arbitration Court in the Canada-France St. Pierre and Miquelon Maritime Boundary Case in Which France Was Granted a 13.8-Mile Exclusive Economic Zone for St. Pierre Island and Miquelon Island [5]

Conclusion

As summarized in the above two cases, Greece's claims related to Megisti Island are not fully supported by the principles of international law. Instead, Greece gives great importance to maximizing its EEZ around Megisti Island, which would enable Greece to connect the EEZs of its islands with the EEZ of the Greek Cypriot administration. Chrysochou and Siousioura argues that the position of Greece on Megisti Island "is vital for the Greek national interests, as its influence if recognized, can connect the Hellenic EEZ to the Cypriot EEZ [6]." That connection would enable Greece to reduce the chances that Turkey could benefit from the natural resources in the Eastern Mediterranean. Both the Anglo-French Continental Shelf Case and the

Canada-France St. Pierre and Miquelon Maritime Boundary Case demonstrate that the decisions of the tribunal court and the arbitration court do not support the claims of Greece regarding Megisti Island. Erdogan's expansionist foreign policies in other regions prevent Turkey from establishing a regional platform from which it can seek equitable solutions to the maritime delimitation dispute under international law. Therefore Turkey, which has the longest coastline in the Eastern Mediterranean, has had to rely on military operations to protect its rights in the area. Turkey's inconsistent political and legal stances have made it difficult for the country to rely on other peaceful dispute-resolution methods. The maritime delimitation agreement between Turkey and Libya also is problematic in that it ignores the EEZ rights of Crete Island and Rhodes Island, both of which are in compliance with the criteria (such as population, size, length of the coast) related to the islands' maritime zone entitlement.

To move forward, Turkey should reset its Eastern Mediterranean policy by relying on the principles of international law and work with Greece to give up its maximalist approach. The consensus in the international community is that the provisions of the UNCLOS have gained the status of customary international law.

Therefore, it is neither reasonable nor sustainable for Turkey to preserve its “persistent objector status” (i.e., the clear and consistent objection of a sovereign state to a norm of customary international law) over the long term. Also of concern is the UNCLOS provision regarding the nature of the regime of a disputed island. The provision is problematic because it does not produce equitable solutions for islands, which in turn creates geographic anomalies with respect to the maritime delimitation rights of the mainland coast. The creation of such anomalies is the main reason why the tribunal court intervened in the Anglo-French Continental Shelf Case and the arbitration court intervened in the Canada-France St. Pierre and Miquelon Maritime Boundary Case. Both courts saw the need to prevent the unfair interpretation of the UNCLOS provision on delimitation.

Greece also needs a reset. It can do this by abandoning its maximalist maritime policies in the Eastern Mediterranean and considering the impacts of the court's rulings about the fair interpretation of Article 121 of UNCLOS regarding the maritime rights of Megisti Island. Turkey's Mavi Vatan (“Blue Homeland”) doctrine, which was developed by retired Turkish admirals rather than maritime law experts and is based on the claim of a vast maritime domain, contains significant fallacies about international law. The doctrine has been a substantial obstacle to the establishment of an effective negotiation mechanism among the countries in the region to determine the maritime boundaries in the Eastern Mediterranean. Turkey should abandon the Mavi Vatan doctrine and develop a holistic approach to maritime delimitation in the Eastern Mediterranean. A key element of that new approach is reliance on regional cooperation and adherence to the international rule of law.
